Horizontal or vertical blades and perforated sheet metal inserts

# Ventilation grilles

## X-GRILLE modular

6 different front frame geometries

6 different installation variants

### Ventilation grilles, made of aluminium, with modular construction – also for continuous horizontal runs

Individual design and simple configuration with more than 3000 variants

- Various designs allow installation from representative areas to warehouses
- Quick and simple installation under normal structural conditions through 6 mounting variants
- Air diffuser for supply and extract air with extensive dimensional variance
- Mesh band installation possible through special end and middle sections
- Can be combined with familiar TROX attachments
- Simple replacement of existing TROX ventilation grilles due to identical dimensions of the installation openings
- Design programme for technical sizing
- Data sets for BIM-based project processing

3 different installation frames

## General information

### Application

- Ventilation grille to be used for supply air or extract air
- Suitable for comfort and industrial areas
- Attractive design element for building owners and architects with demanding aesthetic requirements
- Mixed flow air distribution with directed supply air discharge
- Fixed or adjustable blades or perforated sheet fronts with different designs allow adaptation to meet different local requirements
- For variable and constant volume flows
- For supply air to room air temperature differences from -12 – +15 K
- For installation in walls, sills and rectangular ducts

### Special characteristics

- Energy-efficient and acoustically optimised air discharge
- 6 Front frame options: S, M, L, A, C, H
- Multiple Core options: Horizontal blades, Vertical blades and Pattern designs
- Blades made from extruded aluminium sections – adjustable, fixed straight (0°) or fixed slanted (15°) air outlet
- Perforated sheet construction with the option of circular or rectangular openings
- Easy installation with concealed screw fixing with and without installation subframe, visible screws, terminals or hidden-plaster border
- Aesthetic border construction, almost completely flush with the installation surface
- Linear look, with fixed blades, ideal for continuous horizontal runs
- Use of existing attachments
- Easy replacement of existing TROX grilles due to standard installation dimensions

### Nominal sizes

#### Single grille

- Nominal length: 225, 325, 425, 525, 625, 825, 1025, 1225, 1425, 1625, 1825, 2025 mm
- Nominal height: 75, 125, 225, 325, 425, 525 mm

#### Horizontal run section

- Nominal length of end section: 950 – 2025 mm
- Nominal length of middle section: 2000 mm
- Nominal height: 75, 125, 225, 325, 425, 525 mm
- Other dimensions upon request

### Variants

#### Single grille

- X-GRILLE modular

#### Horizontal run section

- X-GRILLE modular-E-R: End section right
- X-GRILLE modular-E-L: End section left
- X-GRILLE modular-M: Middle section

#### Core design

- H: horizontal blades
- V: vertical blades
- P: Pattern design

#### Inset construction:

##### Blade inserts

- F0: fixed blades 0°, blade pitch 12.5 mm
- F15: fixed blades 15°, blade pitch 12.5 mm
- P0: fixed blades 0°, blade pitch 16.7 mm
- P15: fixed blades 15°, blade pitch 16.7 mm
- MO: adjustable blades

##### Perforated sheet metal inserts

- R: circular holes
- EG: rectangular holes

##### Border frame

- S: 7 mm wide (flat)
- M: 14 mm wide (flat)
- L: 20 mm wide (flat)
- A: 27 mm wide (angled)
- C: 27 mm wide (curved)
- H: 20 mm wide (hidden, 4.7 mm visible)

##### Fixing

- No entry: without fixing variant
- VS: concealed screw fixing
- SP: concealed screw fixing without installation subframe
- A11: visible screw fixing
- HS: Hidden screw fixing
- CF: Clamp fixing

### Attachments

- A: without attachment, only ventilation grilles
- AG, D, DG: rear assembly with damper unit for volume flow rate balancing and / or second set of blades to control the air direction control of ventilation grilles
- EF: Coarse filter media casing

### Accessories

#### Installation subframe: For the fast and simple installation of ventilation grilles

- No entry: without installation subframe
- A1: Installation subframe with 12.5 mm support (for front frame A, C)
- B1: Installation subframe with 5.5 mm support (for front frame L)
- C1: Installation subframe without support (for front frame M)

**Materials and surfaces**

- Border and blades made of aluminium
- Perforated sheet inserts of galvanised sheet steel
- Grille core with rectangular openings made of aluminium
- Linkage and end pieces for adjustable blades made of highly temperature resistant special plastic, flame retardant to UL 94, V-0
- Vertical connecting bars made of aluminium
- Installation subframe made of galvanised sheet steel
- Border and blades anodised, E6-C-0, natural colour
- Anodised surround and perforated rectangular hole insert, E6-C-0, natural colour

- Perforated plate inserts powder-coated, RAL9010 GE50
- P1: Border and insets powder-coated, RAL CLASSIC colour

**Standards and guidelines**

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

**Maintenance**

- Low-maintenance as construction and materials are not subject to wear
- Inspection and cleaning to VDI 6022

## Function

Ventilation grilles are air terminal devices for the supply air and extract air of ventilation and air conditioning systems. They guide the supply air into the room. Ventilation grilles with adjustable blades allow for adapting the discharge direction to the local conditions. The result is a mixed flow ventilation in comfort zones and industrial zones, with good overall room ventilation. Induction slows the airflow down, i.e. the airflow velocity decreases as the distance from the grille increases. The distance at which the airflow velocity has reached a certain value (for example 0.2 m/s) is called the throw distance. The supply air jet from wall grilles arranged close to the ceiling reaches a greater throw distance

than a comparable free jet (without ceiling influence) due to the ceiling influence. Single grilles, groups of grilles and continuous horizontal runs all achieve various throw distances. In cooling mode it is necessary to take account of the jet deflection towards the occupied zone, which increases as the supply air to room air temperature difference increases and the discharge velocity decreases. In heating mode the supply air jet is deflected towards the ceiling. This has no negative effect on the airflow velocity in the occupied zone, but it may affect the complete ventilation of the room.

Schematic illustration of a ventilation grille with horizontal blades

1 Front frame L  
2 Fixing A11 (by others)

3 Core H-F0  
4 Attachment AG

Schematic illustration of a ventilation grille with vertical blades

2 Core V-MO

3 Fixing VS

Schematic illustration of a ventilation grille with rectangular holes

1 Front frame A  
2 Core P-EG

3 Fixing SP

Grille installation with ceiling influence (side view)

Due to the ceiling effect, the supply air flows into the room with a Coanda effect and achieves a greater throw distance ( $L_s$ ).

Grille installation with ceiling influence (top view)

Grille installation without ceiling influence (side view)

With a distance of  $\geq 0.8$  m between the upper edge of the grille and the lower edge of the ceiling, there is no ceiling influence. The throw distance is thus smaller due to the missing Coanda

effect. With a distance of 0.3 m and 0.8 m between the ceiling and the grille, the resulting flow behaviour depends on various factors - e.g. volume flow rate or discharge velocity.

Grille installation without ceiling influence (top view)

## Technical data

Nominal sizes	225 × 75 – 2025 × 525 mm										
minimum volume flow rate	11 – 1013 l/s or 40 – 3647 m³/h										
maximum volume flow rate	65 – 4370 l/s or 234 – 15732 m³/h										
Supply air to room air temperature difference	-12 to 15 K										

Volume flow rates indication for single grille (undivided construction) for supply air.

The individual sizing of the ventilation and acoustic data for the different variants is possible with our free design programme Easy Product Finder.

## Specification text

This specification text describes the general characteristics of the product. Texts for variants can be generated with our Easy Product Finder design program.

Ventilation grilles with gently sloped border, rectangular, for supply and extract air. Function combined with an appealing design. Gently sloped border. Preferably for wall and sill installation but also suitable for rectangular ducts.

Ready-to-install component which consists of a border and symmetrically and aerodynamically profiled, horizontal blades with a concealed linkage that allows for adjusting the blades simultaneously.

### Special characteristics

- Energy-efficient and acoustically optimised air discharge
- 6 Front frame options: S, M, L, A, C, H
- Multiple Core options: Horizontal blades, Vertical blades and Pattern designs
- Aerodynamic aluminium blades, adjustable, fixed straight (0°) or fixed angled (15°) air discharge
- Perforated sheet construction with the option of circular or rectangular openings
- Easy installation with concealed screw fixing with and without installation subframe, visible screws, terminals or hidden-plaster border
- Aesthetic border construction, almost completely flush with the installation surface
- Linear look – fixed blades ideal for continuous horizontal runs

- Use of existing attachments
- Easy replacement of existing grilles due to standard installation dimensions

### Materials and surfaces

- Border and blades made of aluminium
- Border and blades anodised, E6-C-0, natural colour
- Linkage and end pieces for adjustable blades made of highly temperature resistant special plastic, flame retardant to UL 94, V-0
- Vertical lateral mullions made of aluminium
- Patterns made of galvanized metal sheet
- P1: Border, blades and patterns powder-coated, RAL CLASSIC colour

### Technical data

- Nominal sizes: 225 × 75 – 2025 × 525 mm
- Horizontal run section, height: 75 – 525 mm
- Minimum volume flow rate (supply air): 11 – 1013 l/s or 40 – 3647 m<sup>3</sup>/h
- Maximum volume flow rate (supply air), at LWA max. 40 dB(A) without attachments: 65 – 4370 l/s or 234 – 15732 m<sup>3</sup>/h
- Supply air to room air temperature difference: -12 to +15 K

## Weights

The total weight of the X-GRILLE modular is calculated from the individual weights of the construction kits  
 $m_{total} = m_{insert} + m_{front\ frame} + m_{rear\ assembly}$

Weights insert horizontal blades [kg]

**Installation location**

- Installation preferably in walls, sills and rectangular ducts
- Installation with installation subframe is recommended
- For installation without installation subframe, install the front border with concealed screw fixing, visible screws, concealed screws or fixing tabs

Installation opening for a ventilation grille

Installation opening with installation subframe -A1 and -B1 for fixing -VS:

L = Order length of the ventilation grille L

H = Order height of the ventilation grille H

Installation opening for a ventilation grille

Installation opening with installation subframe -C1 for fixing -VS or without installation subframe for fixing -SP

L = Order length of the ventilation grille L - 5 mm

H = Order height of the ventilation grille H - 5 mm

Installation opening for a ventilation grille

Installation opening without installation subframe for fixing

-A11, -HS, -CF:

L = Order length of the ventilation grille L – 13 mm

H = Order height of the ventilation grille H – 13 mm

## Volume flow rate balancing -\*G

## Volume flow rate balancing -S

## Volume flow rate balancing

When several ventilation grilles are installed on the same duct, it may be necessary to balance the volume flow rates.

- AG: Damper unit with opposed action blades, adjustable, secured with a locking screw
- AS: Damper unit with hit and miss damper, adjustable, secured with a locking screw

## Air pattern

- Adjustable blades: Set the air control blades individually or together and depending on the local conditions
- D, DG: Air control blades, fitted at 90° to the front blades, can be adapted to the local conditions

## Nomenclature

**L** [mm]

Nominal length of the ventilation grille

**q<sub>v</sub>** [m<sup>3</sup>/h]; [l/s]

Volume flow rate

**H** [mm]

Nominal height of the ventilation grille

**Δp<sub>t</sub>** [Pa]

Total differential pressure

**m** [kg]

Weight

**l<sub>s</sub>** [m]

Distance from single grille or horizontal run section (throw distance)

**L<sub>WA</sub>** [dB(A)]

A-weighted sound power level of air-regenerated noise
